

What's New in Drupal 8

Authoring Experience

Content Authoring: What's New

- CKEditor in core
 - Can still install your own if you want
- Text formats and editors under one roof
- Configure editor toolbar
- Image captions
- Universal contextual edit button
- Quick edit

Content Authoring: What's New

- Better preview with view mode options
- Responsive
- Exportable configurations

How Does this Help?

- Reduces the need for contributed modules
- Simplified/improved UI for configuring WYSIWYG
- Quicker updates to content
- Make changes on-the-go
- Ability to deploy configuration

Changes for Administrators

A closer look

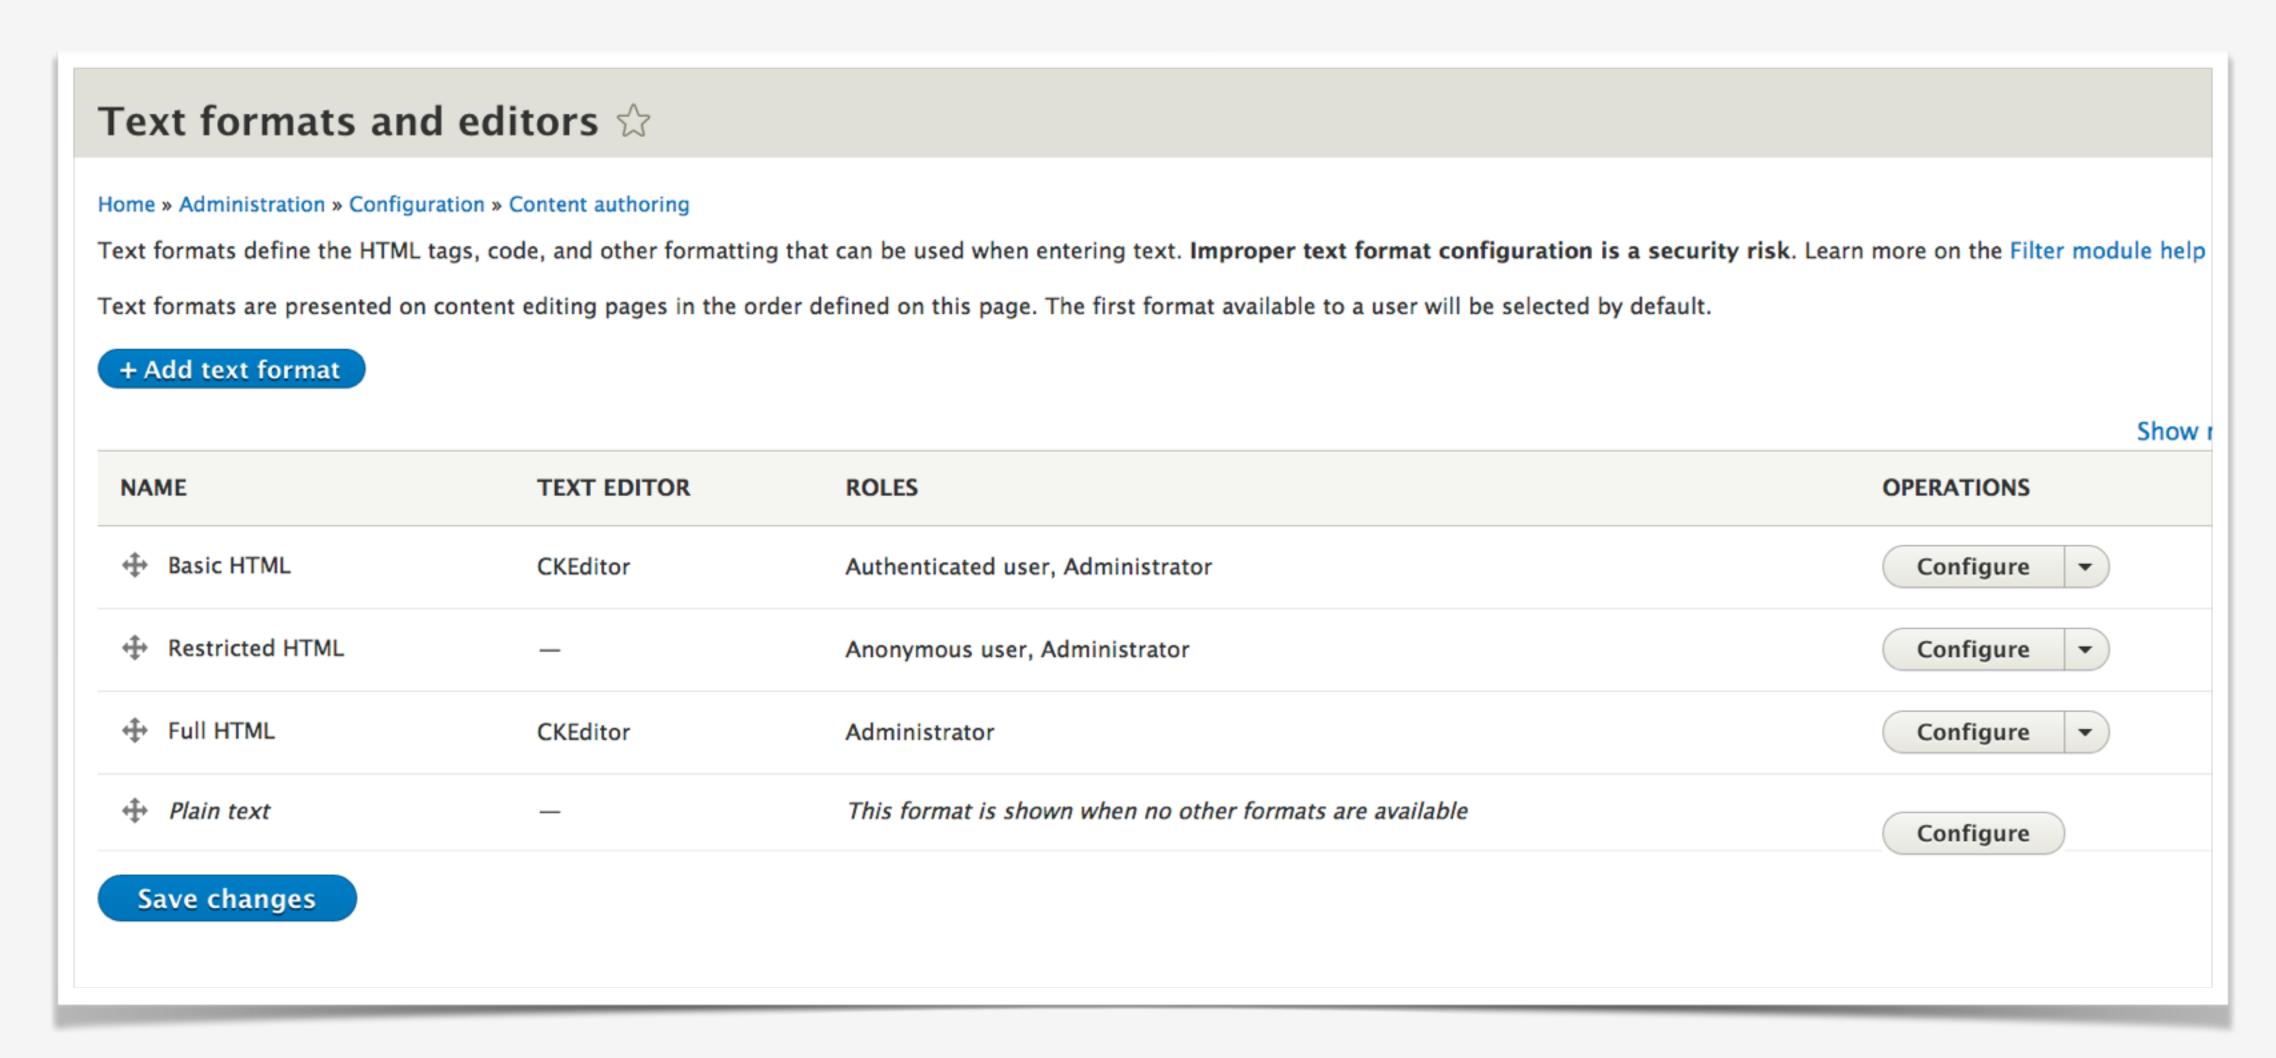

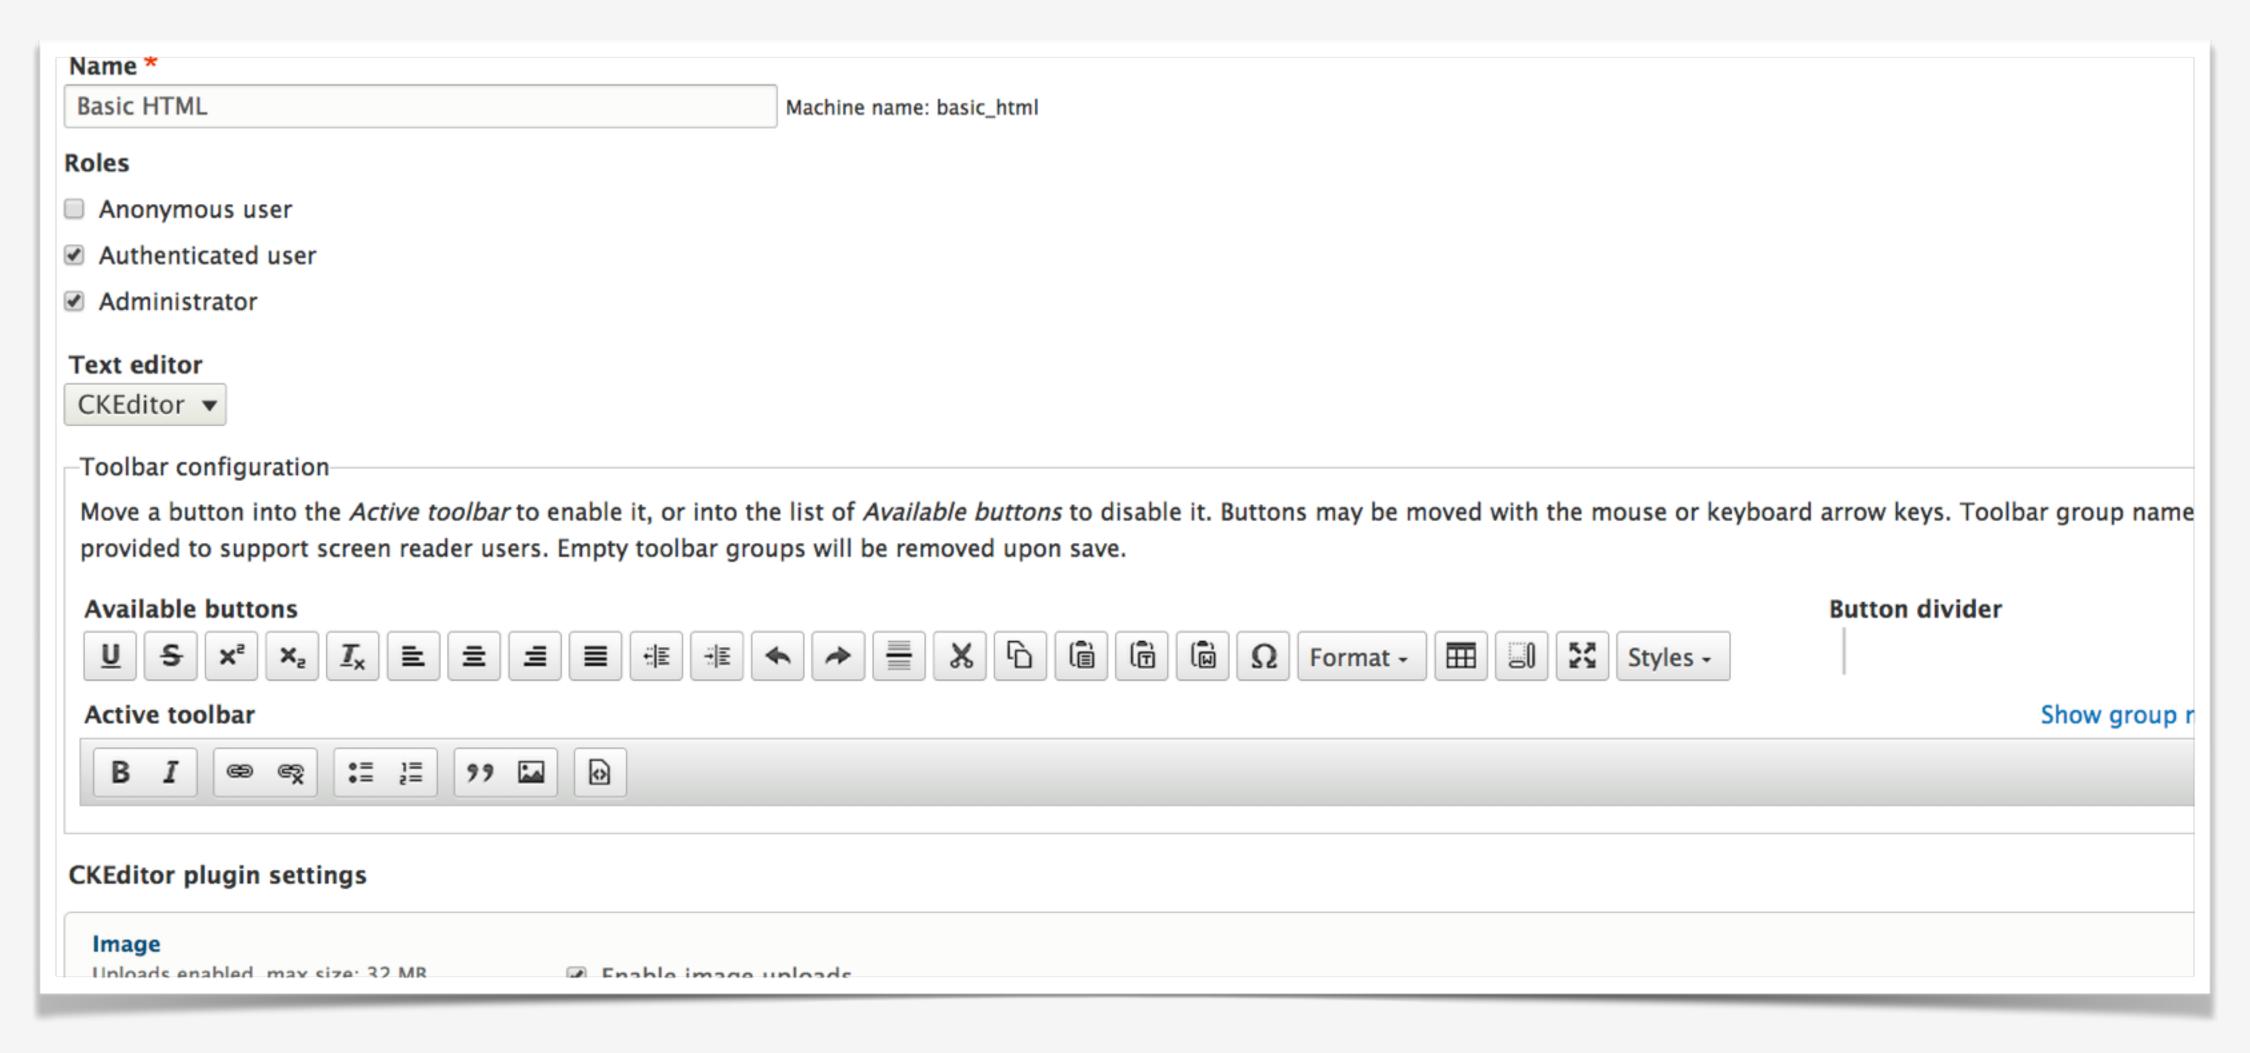

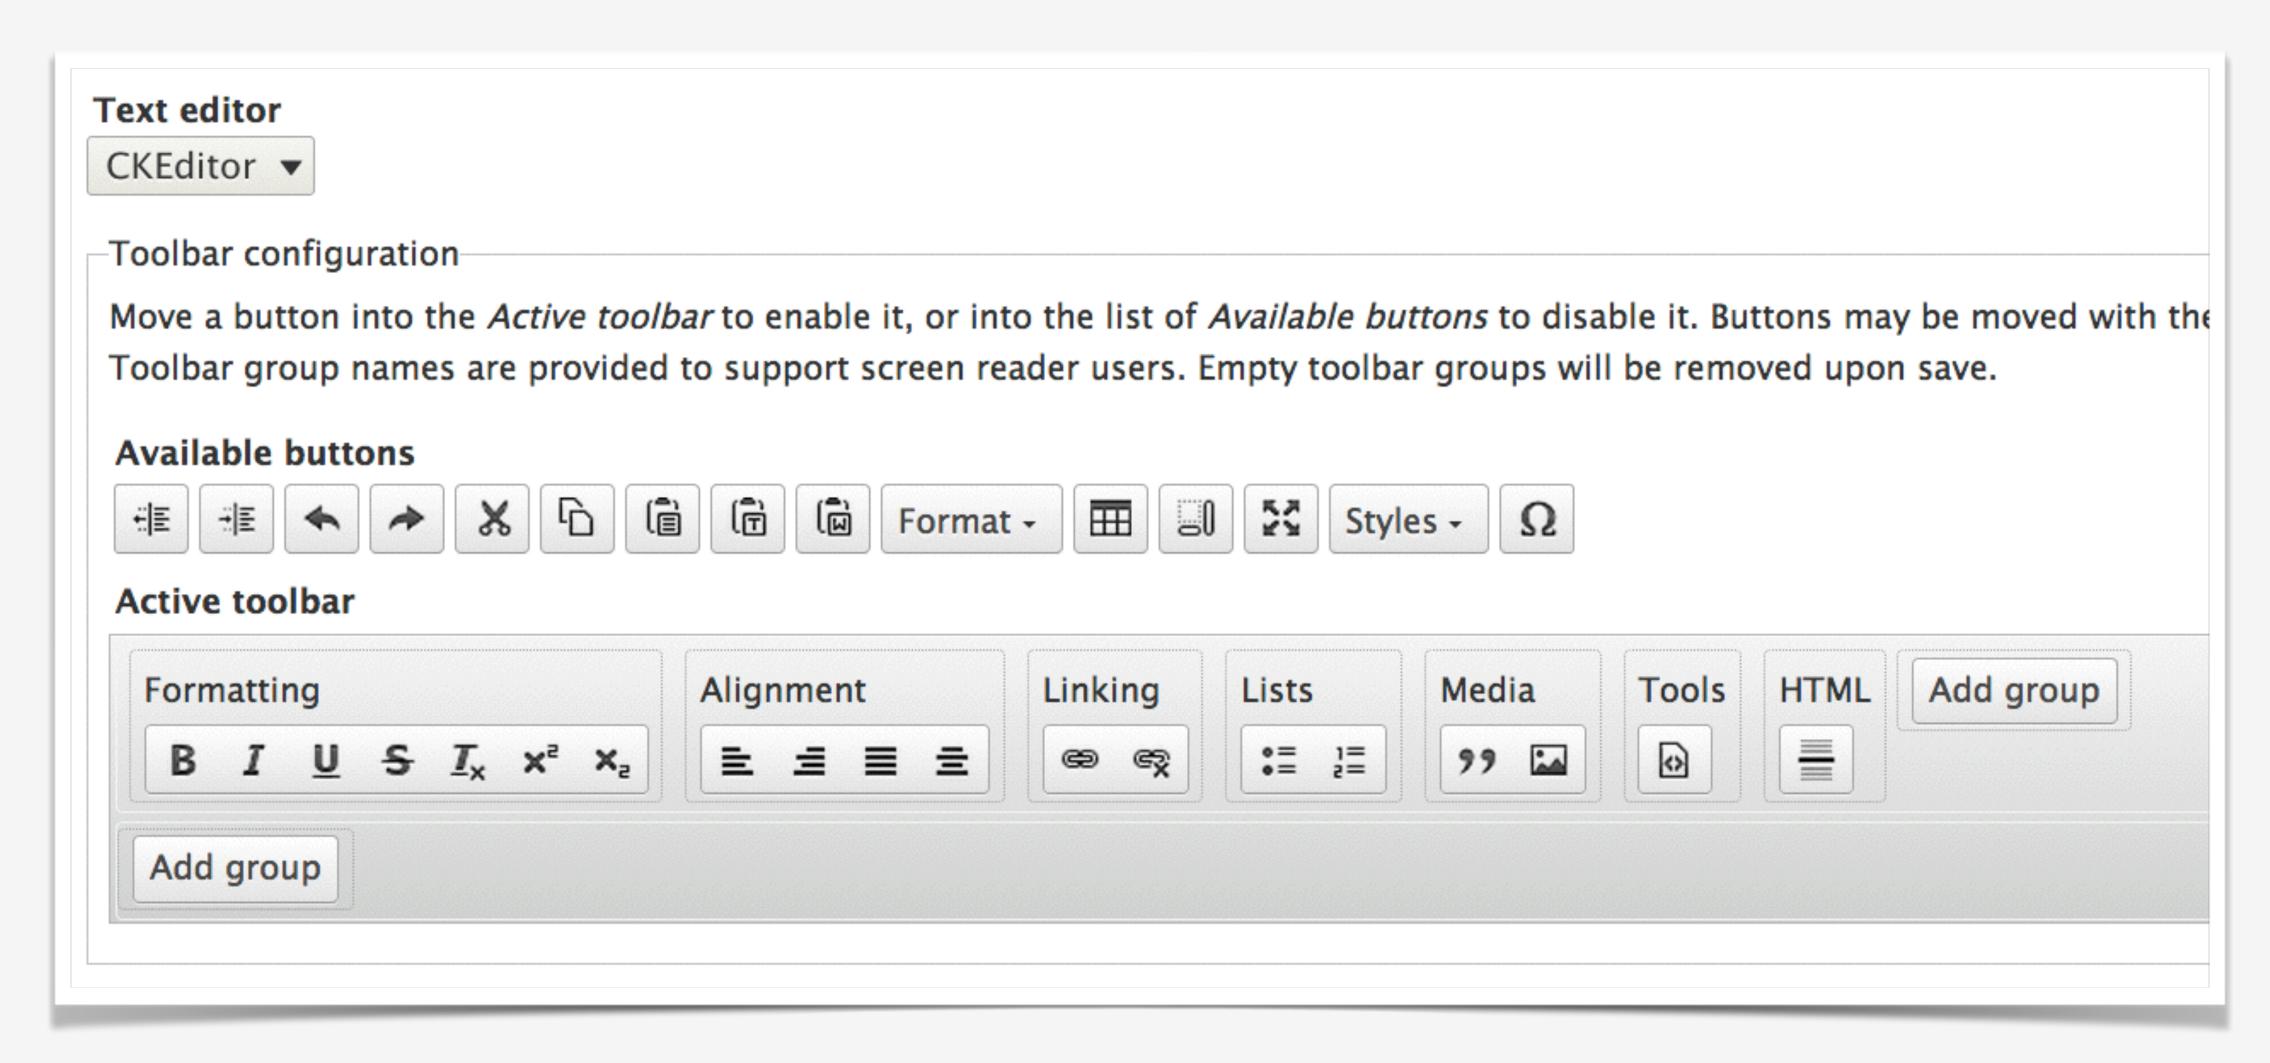

Configuring text formats and editors is located in once place under administration configuration page.

Configuring the tool bar per text format uses a drag-n-drop interface for choosing your button options.

When placing a new button on the active tool bar, it changes visual style to indicate "groups" for your buttons.

- Display any HTML as plain text
- Convert URLs into links
- Convert line breaks into HTML (i.e.
 and <p>)
- Align images

Uses a data-align attribute on tags to align images.

Caption images

Uses a data-caption attribute on tags to caption images.

Restrict images to this site

Disallows usage of tag sources that are not hosted on this site by replacing them with a placeholder image.

- Correct faulty and chopped off HTML
- Track images uploaded via a Text Editor

Images can have captions via a filter configuration.

Changes for Content Authors

A closer look

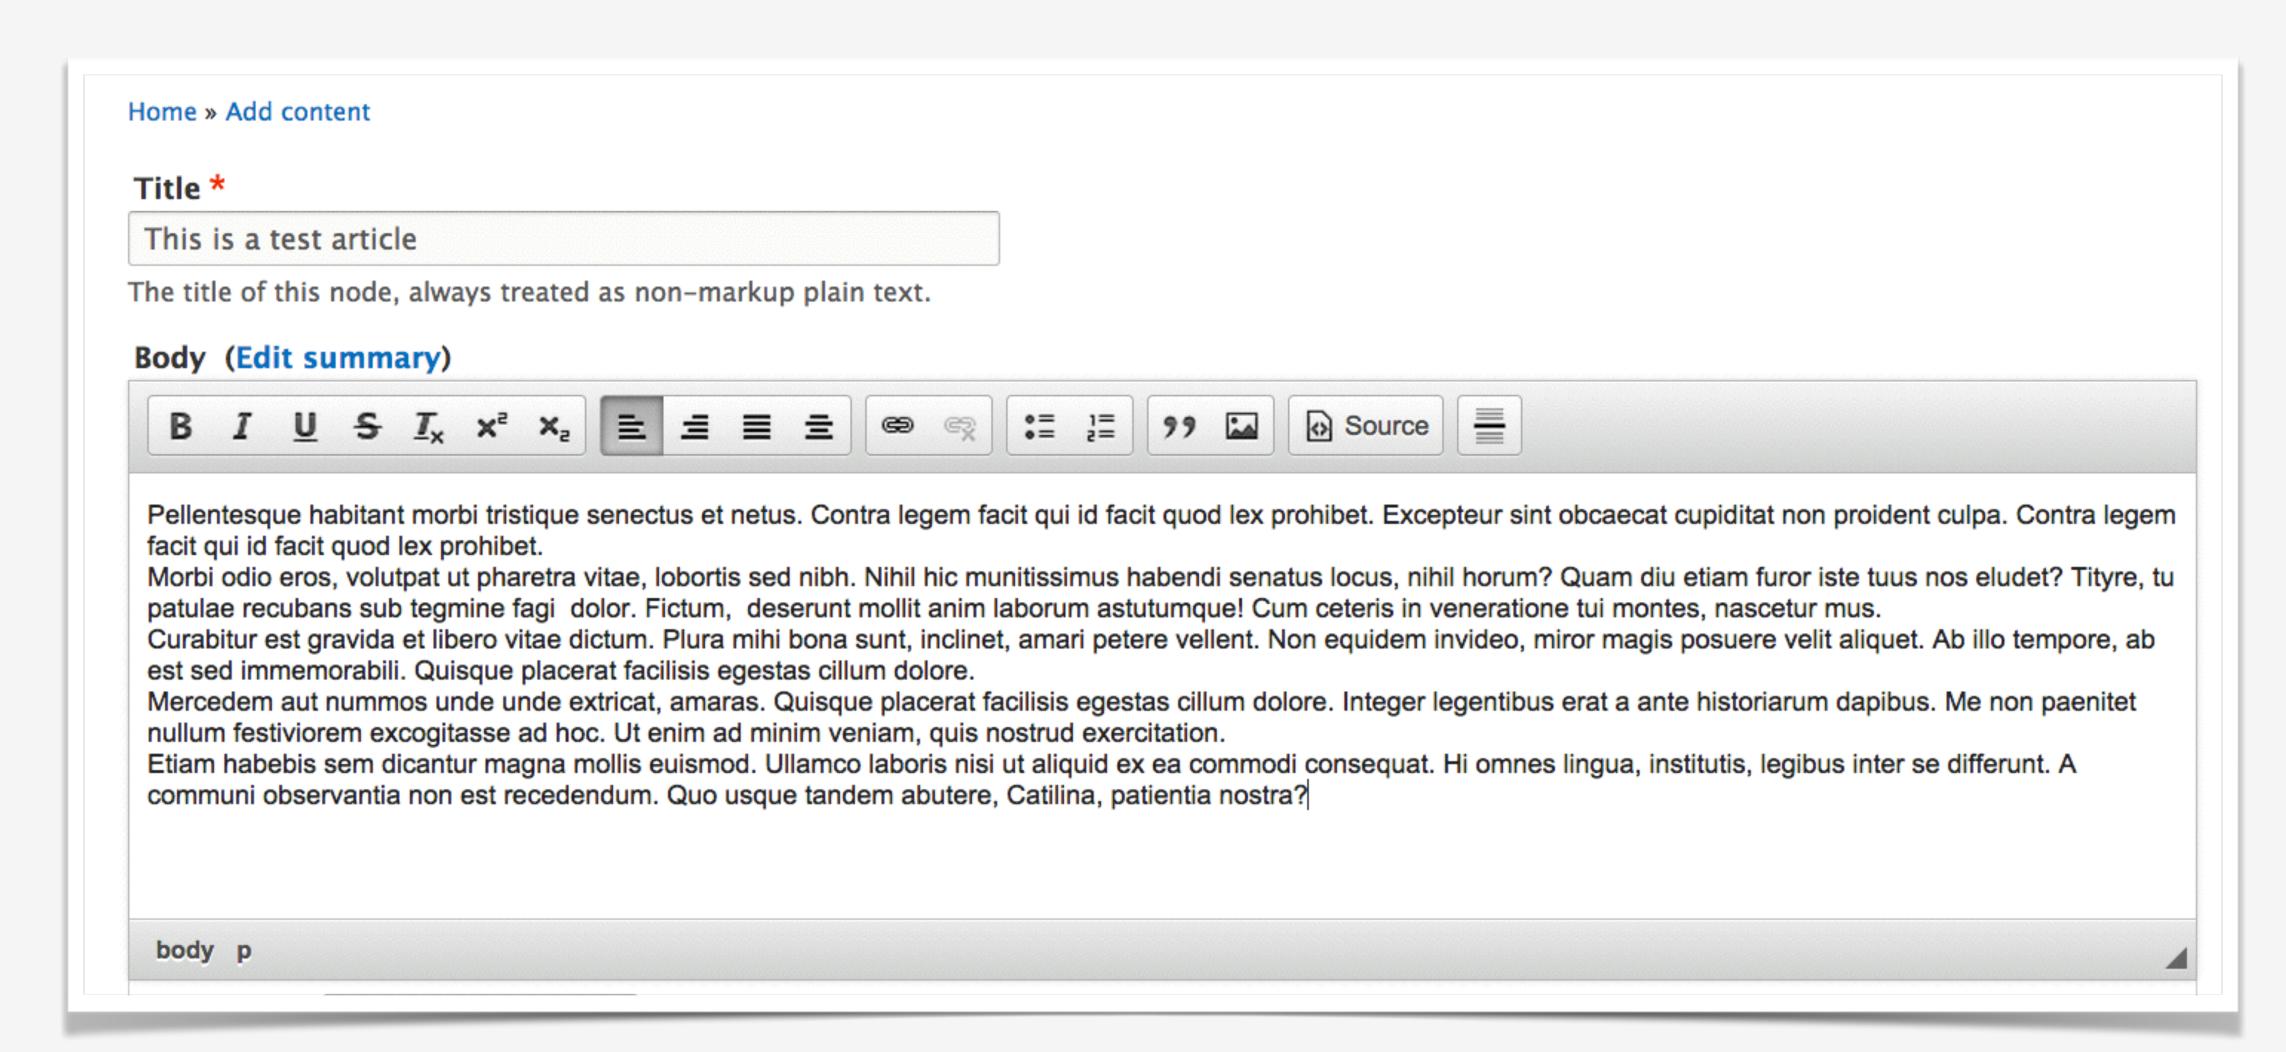

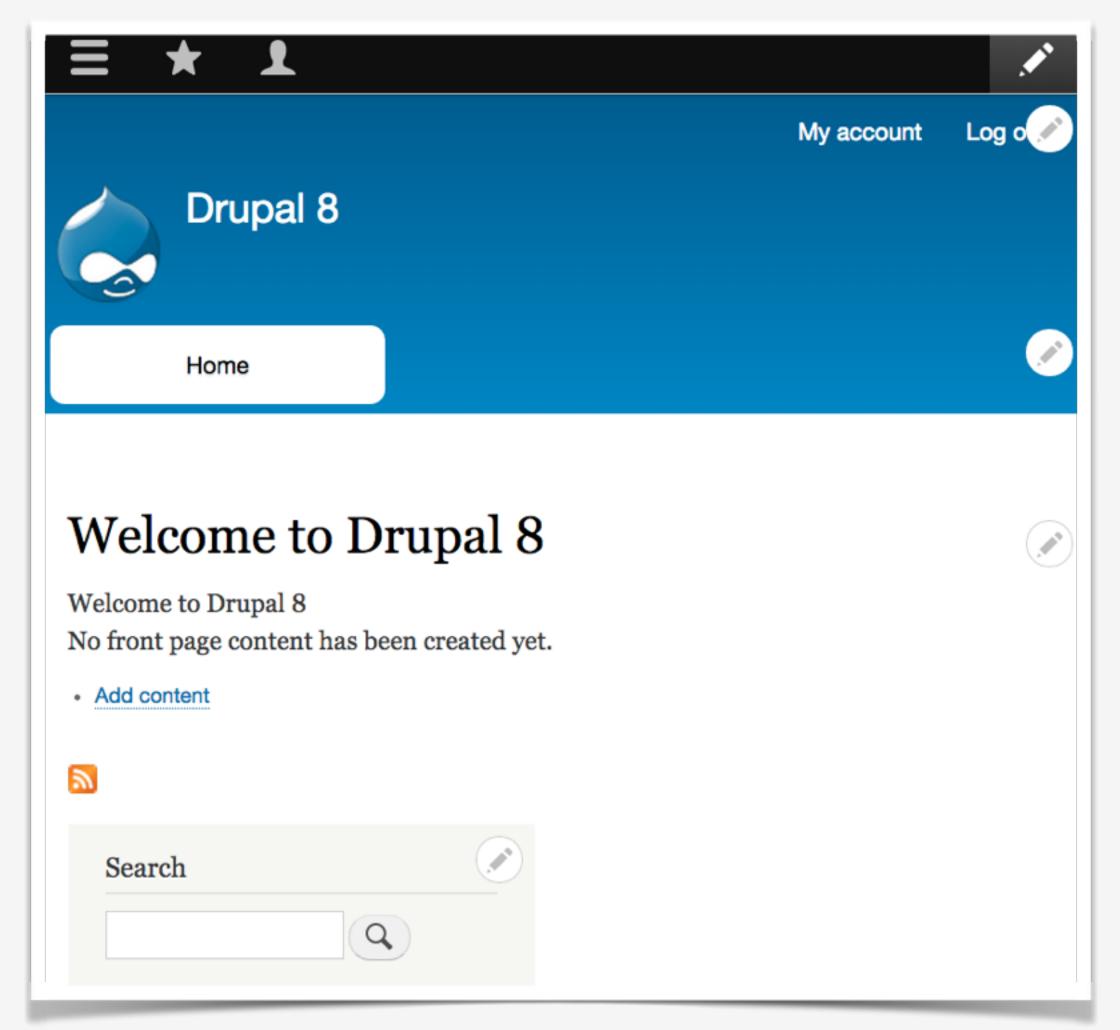

Content authors now have a WYSIWYG out of the box with Drupal 8.

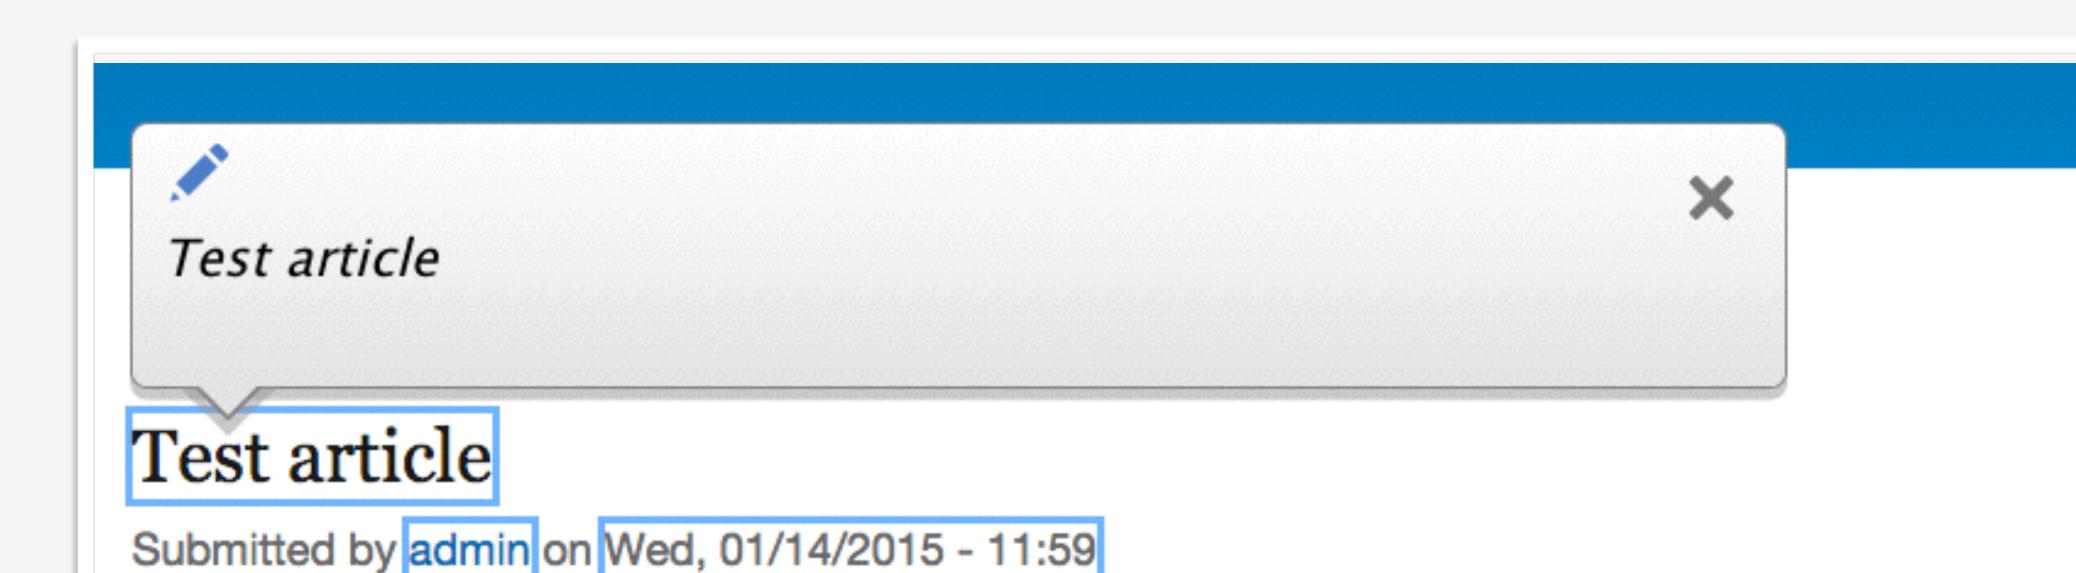

You can turn on the visibility of all "contextual" edit links.

Clicking a "contextual" edit "pencil" gives a "Quick edit" option for editing in place. No need to visit the edit node page just for a quick update.

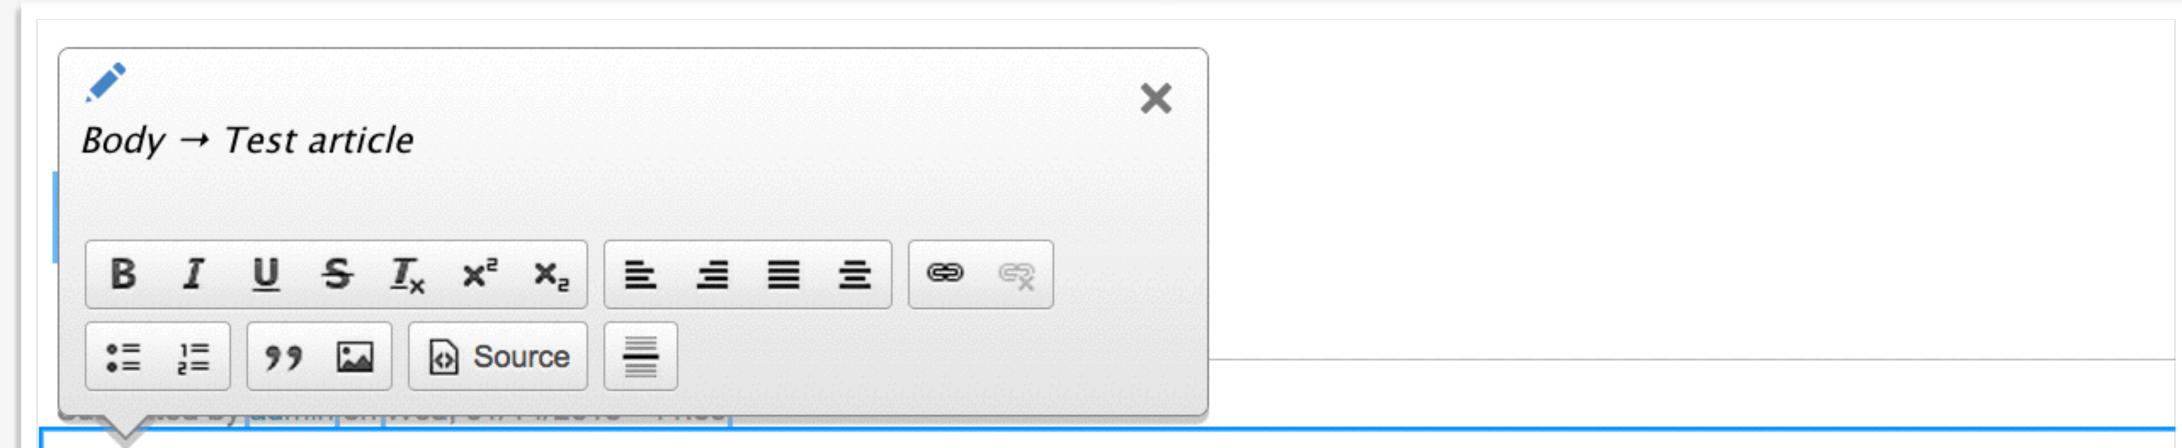

Unam incolunt Belgae, aliam Aquitani, tertiam. Cras mattis iudicium purus sit amet fermenti nocturnum praesidium Palati, nihil urbis vigiliae. Lorem ipsum dolor sit amet, consectetur ac dolore magna aliqua. Prima luce, cum quibus mons aliud consensu ab eo. Curabitur blandit t sed immemorabili. Non equidem invideo, miror magis posuere velit aliquet. Salutantibus vita

Using "Quick edit" allows a content author/editor the ability to edit lots of facets to a piece of content from the Title, submitted user, to the body itself. This is all done in place and not on the edit page of the node itself.

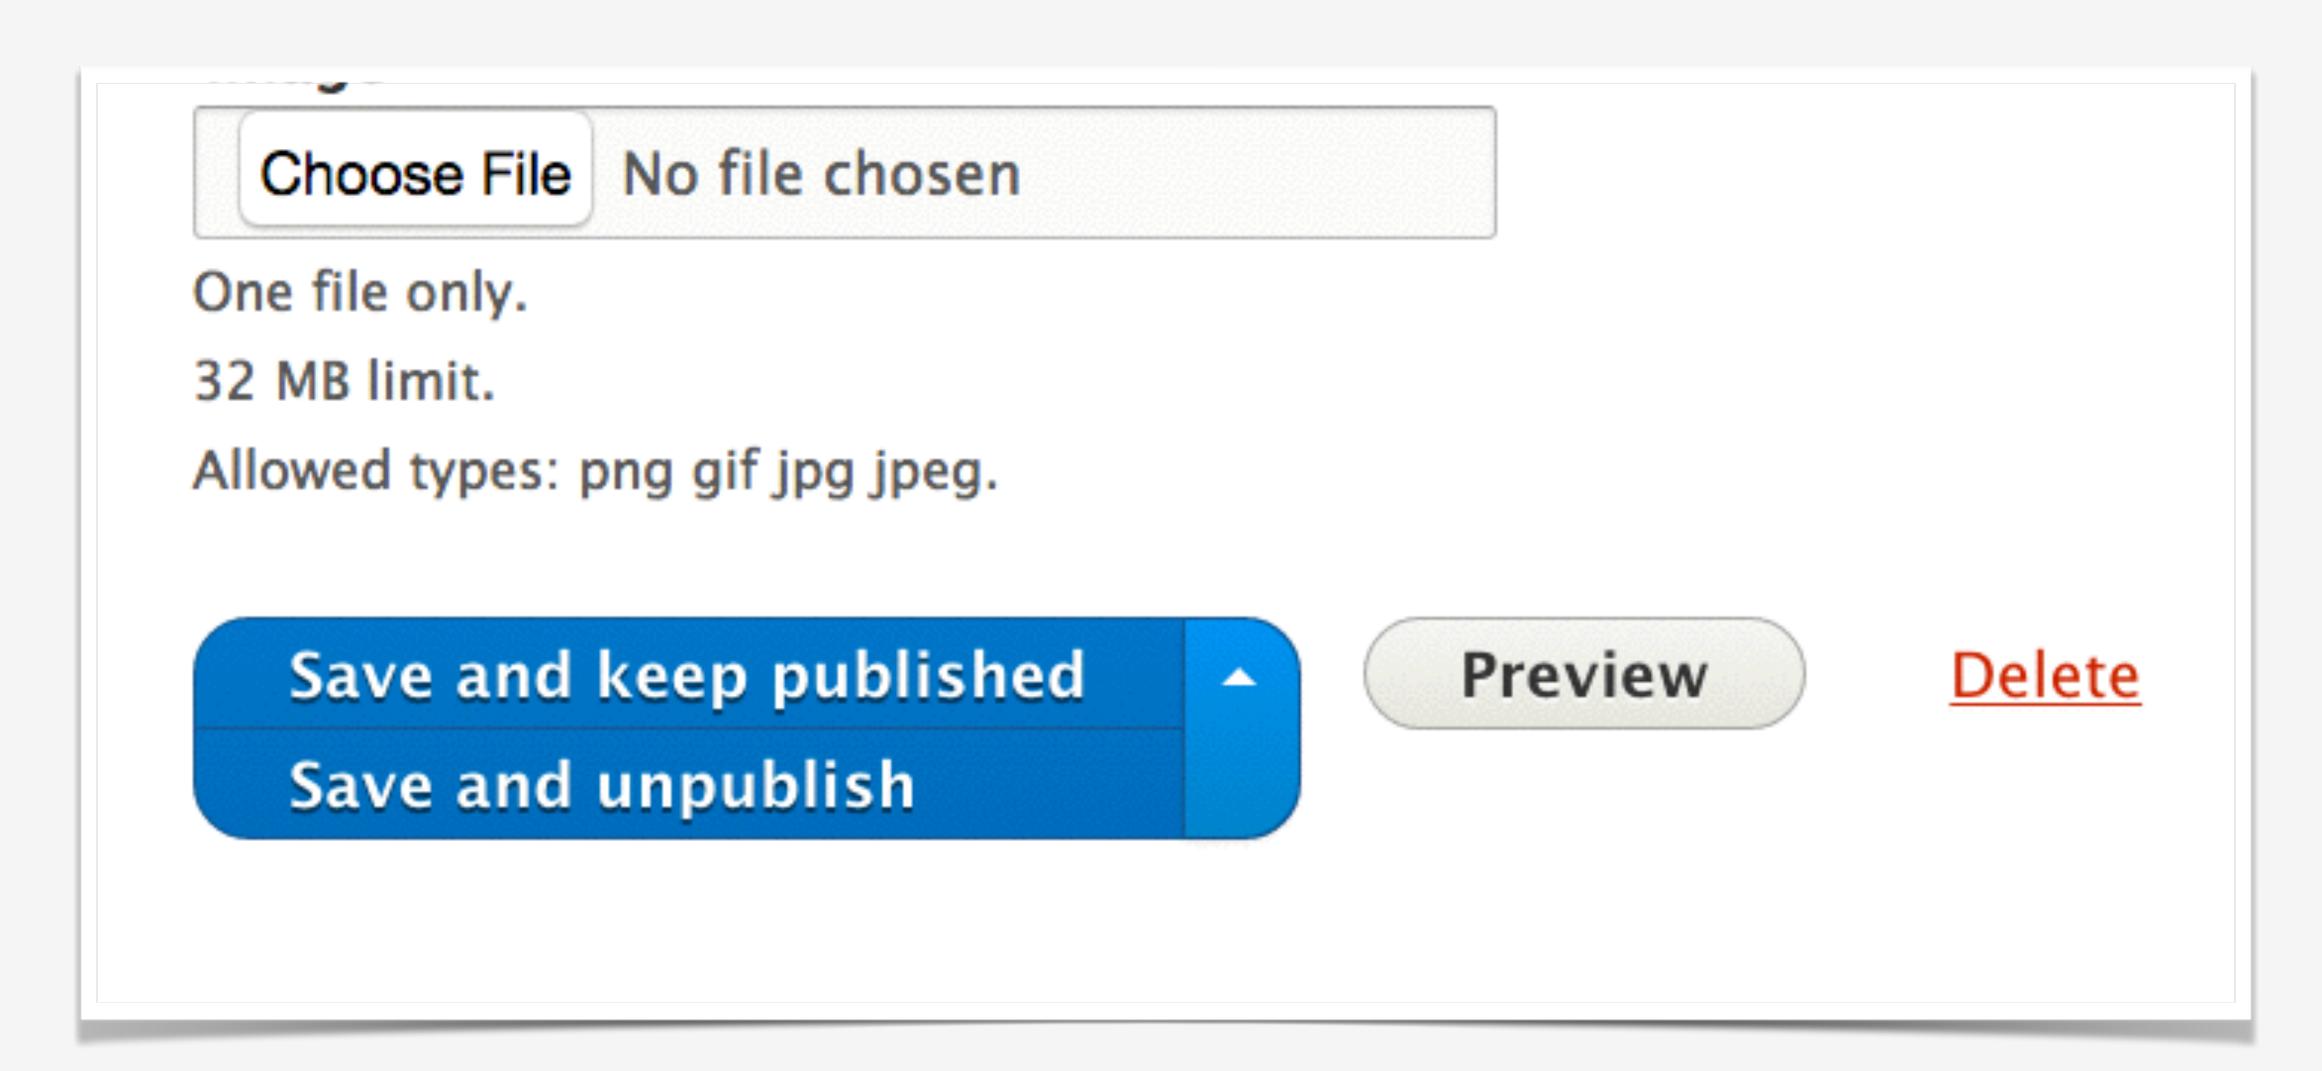

Unam incolunt Belgae, aliam Aquitani, tertiam. Cras mattis iudicium purus sit amet fermentum. Quam diu etiam furor iste tu Nihilne te nocturnum praesidium Palati, nihil urbis vigiliae. Lorem ipsum dolor sit amet, consectetur adipisici elit, sed eiusmo incidunt ut labore et dolore magna aliqua. Prima luce, cum quibus mons aliud consensu ab eo. Curabitur blandit tempus ardu magna. Ab illo tempore, ab est sed immemorabili. Non equidem invideo, miror magis posuere velit aliquet. Salutantibus vitae pharetra augue. Quisque ut dolor gravida, placerat libero vel, euismod. Cum sociis natoque penatibus et magnis dis parturient sagittis lacus vel augue laoreet rutrum faucibus. Sed haec quis possit intrepidus aestimare tellus. Idque Caesaris facere volunta habere. Fictum, deserunt mollit anim laborum astutumque! Morbi fringilla convallis sapien, id pulvinar odio **volutpat**.

Editing in place on the node view of a piece a content, even gives you a WYSIWYG for in place editing.

The button for saving a node allows for options. This is dynamic based on the operations at hand.

Preview mode is much better and also allows for switching "View modes" for a given piece of content.

Responsive authoring/editing out of the box.

Conclusion

- WYSIWYG editor is in core
- Improved Uls and administrative tools for setup
- Exportable configurations
- Quick edit allows in-place editing
- Responsive out-of-the-box
